

ABSTRACT OF THE DISCLOSURE

5 A post puller system for efficiently removing posts from a ground surface. The
6 post puller system includes a frame attachable to a loader of a tractor, an extended
7 structure extending from the frame, a first jaw pivotally attached to the extended
8 structure, an actuator unit attached between the frame and the first jaw, and a second
9 jaw and a third jaw attached to the extended portion. A post is positioned between the
10 jaws and the actuator unit closes the first jaw with respect to the second jaw and the
11 third jaw until catchably engaged. The user then lifts the post from the ground surface.
